Machine learning - Wikipedia

https://en.wikipedia.org/wiki/Machine learning ▼

Machine learning is a field of computer science that gives computers the ability to learn without being explicitly programmed. Arthur Samuel, an American pioneer in the field of computer gaming and artificial intelligence, coined the term "Machine Learning" in 1959 while at IBM.

Machine learning · Machine Learning (journal) · Timeline of machine learning · H2O

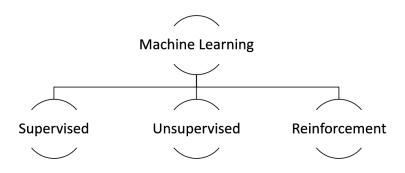

- Reducing human/machine efforts required to perform a task (time optimization).
- Increasing the performance of a task (efficiency optimization).

Steps in Machine Learning

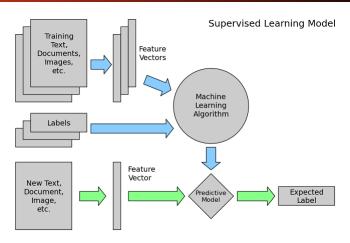

- Collecting data
- Preparing the data
- Training a model
- Evaluating the model
- Improving the performance
